PHASE 1: BRAINSTORMING & IDEATION

1. Problem Statement:

Individuals, startups, and freelancers often require legal documents such as Employment Contracts, Non-Disclosure Agreements (NDA), and Lease Agreements. However, hiring a lawyer is expensive (Rs.5000 - Rs.10000 per document), time-consuming, and the complex legal terminology is difficult for a common person to understand. There is a need for an affordable, fast, and user-friendly solution.

2. Proposed Idea / Solution:

LegalEase is an AI-powered web application that generates professional legal documents in under 2 minutes. The user just needs to provide basic details like document type, party names, specific terms, and date. Our system uses Google Gemini 1.5 Pro to generate a structured, accurate, and customizable legal document which can be edited and downloaded as TXT, DOCX, and PDF.

3. Why We Chose Gemini 1.5 Pro?

We selected Google Gemini 1.5 Pro because of its 1 Million token context window. This allows the model to handle large legal contexts and maintain coherence throughout the document. It has excellent understanding of legal language and provides highly accurate, formatted outputs compared to other models.

4.Real-World Scenarios:

Scenario 1: For a Startup Founder

Input: A founder needs an Employment Contract for a new hire.Process: He enters the employee details, roles, salary, and joining date.

Output: The system generates a complete Employment Contract with clauses for roles & responsibilities, compensation, and confidentiality, with company logo and branded header/footer.

Scenario 2: For a Freelancer

Input: A freelancer needs an NDA to protect his project ideas with a client.

Process: He enters the client name and the scope of confidentiality.

Output: A legally sound NDA is generated instantly, which can be shared and signed.

Scenario 3: For a Landlord

Input: A landlord wants to create a Lease Agreement.

Process: He enters the tenant details, property address, rent amount, and lease duration.

Output: A formatted Lease Agreement with all necessary terms in a table format is generated as a DOCX file, which is fully editable.

5. Project Goal:

The main goal of LegalEase is to democratize access to legal documentation. To enable entrepreneurs, professionals, and individuals without any legal background to create reliable and professional legal documents easily and affordably.

6. Expected Outcome:

A Streamlit-based user interface connected to a FastAPI backend and Gemini API, which generates branded, editable legal documents in multiple formats.
